Penjelasan:

Kode ini berfungsi untuk membaca data dari sebuah file JSON yang berisi informasi tentang mahasiswa, lalu menampilkan data tersebut ke layar (console).

- 1. Pertama, kode mengimpor modul fs (file system) dari Node.js yang digunakan untuk berinteraksi dengan sistem file, seperti membaca file.
- 2. Selanjutnya, kode membaca isi file JSON dengan nama jurnal7_1_2211104070.json secara sinkron (langsung menunggu sampai proses selesai) dan membacanya sebagai teks dengan format UTF-8.
- 3. Teks hasil baca file tersebut kemudian diubah (parsing) menjadi objek JavaScript menggunakan JSON.parse(). Objek ini disimpan dalam variabel mahasiswa.
- 4. Terakhir, kode menampilkan informasi yang ada di dalam objek mahasiswa ke console, seperti nama, NIM, kelas, dan email mahasiswa dengan format yang rapi.

Penjelasan:

Kode ini membaca file JSON berisi data anggota tim, mengubahnya menjadi array objek JavaScript, lalu mencetak daftar anggota ke console dengan format: NIM, nama lengkap, usia, dan jenis kelamin.

Penjelasan:

Kode ini membaca file JSON berisi data glosarium, mengambil bagian GlossEntry, lalu menampilkan isinya ke console, seperti ID, istilah, akronim, definisi, dan referensi terkait.
